

Kinds of Energy

Name: _____

We use three basic kind of energy everyday: light, heat, and sound. Energy cannot be used up or destroyed. It only changes forms.

Energy falls into two basic groups: moving energy or stored energy.

Moving energy is energy that is doing work or moving something. **Stored energy** is energy that is not being used but can be used later.

When a battery is charged, moving energy becomes stored energy. When we use a battery in a toy, the stored energy becomes moving energy.

Kinds of Energy

1. What are three basic forms of energy?

2. What is moving energy?

3. What is stored energy?
